

Wiley uses Amazon Web Services (AWS) as cloud platform provider. Data is stored in Northern Virginia, United States. AWS is a leading provider with robust controls in place to maintain security and compliance in the cloud.

The main advantages of AWS hosting are performance, security, and scalability. With a near-perfect uptime of 99.9% we can guarantee worldwide availability of all our Assessment Platforms.

## Purpose

Amazon Web Services (AWS) provides cloud computing infrastructure required for the provisioning of our Assessment Platforms. This includes the application, database and backup storage.

## Data Processing

- Basic contact information for the purpose of logging in (name, email address)
- Server log data relating to the platform (IP address)
- Data is transferred on a continuous basis

## Data Privacy

- Data encryption in transit (TLS1.2 or higher), at rest (AES256)
- Encryption keys are managed by the Wiley GIS (Global Integrated Services) team

## Compliance

- Compliance: <https://aws.amazon.com/compliance/programs/>
- ISO Certificates: <https://aws.amazon.com/compliance/iso-certified/>
- SOC Certificates\*: <https://aws.amazon.com/compliance/soc-faqs/>

*\*Wiley is not permitted to share SOC certificates with partners or clients.*
