Catalyst™ Single Sign-On (SSO)
Using OpenID Connect

Wiley supports SSO in our Catalyst platform using an OpenID Connect Authorization Code flow. Wiley acts as the Service Provider, with the customer hosting an OpenID Connect Identity Provider that can provide an email for the user. Catalyst supports two entry methods for users with SSO. The first method can be used from a company portal landing page (such as MyApplications.Microsoft.com) and can provide one-click access to Catalyst. The second method is from the Catalyst login page where a user can provide their company email address. Catalyst will test the email address on the login page. If that email is found to be part of an SSO integration, Catalyst will send the learner to their company's OpenID Connect provider along with a request to initiate an "Authorization Code" flow between the customer's company and Catalyst. The learner will either be asked to authenticate using the company's login page or may already be authenticated and may return immediately to Catalyst. Catalyst will finish the request with the OpenID Connect system and identify the user by their email address in our system.

GETTING STARTED

1. **First, set up an application (account) for Catalyst within your OpenID Connect system. Please enter your email domain in the fields below.** Note, you are setting up an Everything DiSC on Catalyst application; not to be confused with other companies named "Catalyst."

RedirectURL: Enter your email domain without without any periods, special characters, or the domain extension. Example: *wiley* for *@wiley.com*.	https://catalyst.everythingdisc.com/sso/callback/
Catalyst SSO URL: Enter your email domain without without any periods, special characters, or the domain extension. Example: *wiley* for *@wiley.com*.	https://catalyst.everythingdisc.com/sso/
Login URL:	https://catalyst.everythingdisc.com/login

2. **Next, enter the following information and send the completed form to CatalystSSO@wiley.com.**

Company Name:	
Email Domain:	
Tester's Email Address: Email address of an active Catalyst user at the Company that can test the SSO configuration	
Authorization Endpoint URL: OpenID Connect authorization endpoint URL where Catalyst issues authentication requests	
Token Endpoint URL: OpenID Connect token endpoint URL provided by IdP	
Client ID: OpenID Connect client ID provided by IdP that identifies Catalyst	

3. **Securely send the Client Secret to CatalystSSO@wiley.com.**

4. **Wiley will confirm receipt of the form & Client Secret, verify the information provided, and then schedule next steps.**
